Advancements in Ion Torrent™ Semiconductor Sequencing Technology

Thursday, October 25, 2012

12:00 — 1:00 pm

Renaissance Grand Hotel

Hawthorne Room

800 Washington Ave., St. Louis

Presented by: Mike Lelivelt, PhD, Director of Bioinformatics and Software Products, Ion Torrent

Powered by fast, simple, scalable semiconductor chips, the Ion Personal Genome Machine (PGM™) Sequencer introduced an entirely new approach to sequencing, making it dramatically faster and more accessible. The new Ion Proton® Sequencer goes even further by making genome-scale sequencing accessible to all. During this seminar we will discuss substantial advancements in Ion Torrent™ technology expansion and flexibility, workflow simplicity, accuracy and innovation in analysis.
